Chapter

1 Introduction

The newest internet trend at the dawn of the 21st century certainly is the Online Social Network (OSN). Words like tweeting, sharing, liking, trending and tagging have found common acceptance in the vocabulary of today's internet savvy users while services like Facebook, Google+, LinkedIn and Twitter have become part of everyday life.

The far reaching influence of today's most popular OSNs is best illustrated with the help of some statistics. In May 2013, 72% of all internet users were active on a social network [8]. At the time of writing, Facebook has 1.23 Billion monthly active users which corresponds to 17% of the global population [4, 14]. Furthermore, the average Facebook user spends 15 hours and 33 minutes online per month [13]. These numbers show that social networks no longer represent the latest craze of an internet bubble but are conversely deeply rooted in our daily habits.

1.1 Problem Statement

1.2 Previous Work

1.3 Goals of this Thesis

1.4 Structure of this Thesis

Chapter

2 Preliminaries

This chapter covers briefly the mathematical knowledge required to understand the mechanics behind cryptographic algorithms presented later in this text. First, next, then, finally,...

Note that this chapter only scratches the surface of cryptographic fundamentals to understand the remainder of the thesis. Definitions are always provided without proof. For a more in depth discussion about the topics in this chapter, the reader is refered to [12] and [2].

If the reader feels he has sufficient background of the concepts covered in this chapter, the chapter can be skipped without loss of comprehension.

2.1 Complexity Theory

In practice no modern cryptographic agorithm achieves perfect secrecy[1], i.e. with unbounded computational power all practical cryptographic algorithms can be broken. Therefore a more pragmatic definition of security is always considered, namely security against adversaries that are computationally bound to their finite resources. In this pragmatic view of security an algorithm is considered secure only if the probability of success is smaller than the reciprocal of any polynomial function. The negligible function can be used to exactly describe this notion in a formal way.

Definition 2.1. A **negligible function** in k is a function $\mu(k) : \mathbb{N} \to \mathbb{R}$ if for every polynomial $p(.)$ there exists an N such that for all $k > N$ [5]

$$\mu(k) < \frac{1}{p(k)}$$

The negligible function will be used later on in this chapter to formally describe computationally infeasible problems. In such a context k often represents the security parameter. The larger k will be chosen, the smaller $\mu(k)$ will be.

[1] Note that the one-time pad is not taken into account. Although it is the only proven information secure cryptographic algorithm, it is seldom used in practical cryptographic systems.

2.2 Abstract Algebra

Abstract algebra is a field of mathematics that studies algebraic structures such as groups, rings and vector spaces. These algebraic structures define a collection of requirements on mathematical sets such as e.g., the natural numbers $\mathbb{N}$ or matrices of dimension 2 x 2 $\mathbb{R}^{2x2}$. If these requirements hold, abstract properties can be derived. Once a mathematical set is then categorised as the correct algebraic structure, properties derived for the algebraic structure will hold for the set as a whole.

In the light of our further discussion, especially additive and multiplicative groups prove to be essential concepts. However, algebraic groups come with a specific vocabulary such as binary operation, group order and cyclic group that are defined in this section as well.

Definition 2.2 (Binary operation). A *binary operation* * on a set S is a mapping $S \times S \to S$. That is, a binary operation is a rule which assigns to each ordered pair of elements a and b from S a uniquely defined third element $c = a * b$ in the same set S. [12, 2]

Definition 2.3 (Group). A *group* $(G, *)$ consists of a set G with a binary operation $*$ on G satisfying the following three axioms:

1. *Associativity* $\forall a, b, c \in G : a * (b * c) = (a * b) * c$
2. *Identity element* $\forall a \in G, \exists e \in G : a * e = e * a = a$ where e denotes the *identity element* of G
3. *Inverse element* $\forall a \in G, \exists a^{-1} : a * a^{-1} = a^{-1} * a = 1$ where a^{-1} denotes the *inverse element* of a

Definition 2.4 (Commutative group). A group $(G, *)$ is called a *commutative group* or an *abelian group* if in addition to the properties in Definition 2.3, also commutativity holds.

4. **Commutativity** $\forall a, b \in G : a * b = b * a$

From here on a group $(G, *)$ will be denoted $\mathbb{G}$. Depending on the group operation $*$, $\mathbb{G}$ is called either a *multiplicative group* or an *additive group*. In Definition 2.3 the multiplicative notation is used. For an additive group the inverse of a is often denoted $-a$ [12].

The perfect example of a commutative group is the set of integers with the addition operation $(\mathbb{Z}, +)$ since the addition is both associative and commutative in $\mathbb{Z}$. Furthermore, the identity element $e = 0$ and the inverse element $\forall a \in \mathbb{Z}$ is $-a \in \mathbb{Z}$. Note that the set of natural numbers with the addition operation $(\mathbb{N}, +)$ is not a commutative group because not each element of $\mathbb{N}$ has an inverse element.

Definition 2.5 (Cyclic group). A group $\mathbb{G}$ is *cyclic* if and only if $\forall b \in \mathbb{G}, \exists g \in \mathbb{G}, \exists n \in \mathbb{Z} : g^n = b$. Such an element g is called a **generator** of $\mathbb{G}$.

Definition 2.5 implies that in a cyclic group every element can be written as a power of one of the group's generators.

Definition 2.6 (Finite group). A group $\mathbb{G}$ is *finite* if the number of elements in $\mathbb{G}$ denoted $|\mathbb{G}|$ is finite. The number of elements $|\mathbb{G}|$ in a finite group is called the *group order*.

The set $\mathbb{Z}_n$ denotes the set of integers modulo n. The set $\mathbb{Z}_5$ with the addition operation is a cyclic finite group of order 5. The set $\mathbb{Z}_5 \backslash \{0\}$ with the multiplication operation, often denoted $\mathbb{Z}_5^*$, is a cyclic finite group of order 4 where the neutral element $e = 1$. Two is an example of a generator in $\mathbb{Z}_5^*$ since every element in $\mathbb{Z}_5^*$ can be written as $\{2^n | n \in \mathbb{Z}\}$.

Definition 2.7 (Order of an element). Let $\mathbb{G}$ be a group. The *order of an element* $a \in G$ is defined as the least positive integer t such that $a^t = e$. If there exists no such t, t is defined as ∞.

Theorem 2.8. *If the order of a group G equals a prime p, the group is cyclic and commutative.*

2.3 Number Theoretic Assumptions

This section presents a collection of number theoretic assumptions. The security of our future constructions falls or stands on these assumptions. If one of these assumptions would prove to be invalid, not only this thesis would be superfluous, society would no longer be protected by cryptographic protocols like RSA or ElGamal encryption [3, 12].

In the definitions that follow $\langle G, n, g \rangle \leftarrow \mathcal{G}\left(1^k\right)$ is defined as the setup algorithm that generates a group G of order n, a generator $g \in G$ and an element $a \in G$ on input of the security parameter k.

Definition 2.9 (DL). The *discrete logarithm problem* is defined as follows. Given a finite cyclic group G of order n, a generator $g \in G$ and an element $a \in G$, find the integer $x, 0 \leq x \leq n-1$ such that $g^x = a$.

The *discrete logarithm assumption* holds if for any algorithm $\mathcal{A}(g, g^x)$ trying to solve the DL problem there exists a negligible function $\mu(k)$ such that

$$\Pr\left[\mathcal{A}(g, g^x) = a \mid \langle G, n, g \rangle \leftarrow \mathcal{G}\left(1^k\right)\right] \leq \mu(k)$$

where the probability is over the random choice of n, g in G according to the distribution induced by $\mathcal{G}\left(1^k\right)$, the random choice of a in G and the random bits of the algorithm $\mathcal{A}$.

Definition 2.10 (CDH). The *Computational Diffie-Hellman problem* is defined as follows. Given a finite cyclic group G of order n, a generator $g \in G$ and g^a, g^b with uniformly chosen random independent elements $a, b \in \{1, \ldots, |G|\}$, find the value g^{ab}.

The *Computational Diffie-Hellman assumption* holds if for any algorithm $\mathcal{A}\left(g, g^a, g^b\right)$ trying to solve the CDH problem there exists a negligible function $\mu(k)$ such that

$$\Pr\left[\mathcal{A}\left(g, g^a, g^b\right) = g^{ab} \mid \langle G, n, g\rangle \leftarrow \mathcal{G}\left(1^k\right)\right] \leq \mu(k)$$

where the probability is over the random choice of n, g in G according to the distribution induced by $\mathcal{G}\left(1^k\right)$, the random choice of a, b in $\{1, \ldots, |G|\}$ and the random bits of the algorithm $\mathcal{A}$.

Definition 2.11 (DDH). The *Decisional Diffie-Hellman problem* is defined as follows. Given a finite cyclic group G of order n, a generator $g \in G$ and g^a, g^b, g^{ab}, g^c with uniformly chosen random independent elements $a, b, c \in \{1, \ldots, |G|\}$, distinguish $\left\langle g, g^a, g^b, g^{ab}\right\rangle$ from $\left\langle g, g^a, g^b, g^c\right\rangle$.

Define $\mathcal{A}(x)$ as an algorithm returning `true` if $x = \left\langle g, g^a, g^b, g^{ab}\right\rangle$ and `false` if $x = \left\langle g, g^a, g^b, g^c\right\rangle$ for $c \neq ab$. The *Decisional Diffie-Hellman assumption* holds if for any such algorithm $\mathcal{A}(x)$ there exists a negligible function $\mu(k)$ such that

$$|\Pr\left[\mathcal{A}\left(\left\langle g, g^a, g^b, g^{ab}\right\rangle\right) = \texttt{true}\right] - \Pr\left[\mathcal{A}\left(\left\langle g, g^a, g^b, g^c\right\rangle\right) = \texttt{true}\right]| \leq \mu(k)$$

where the probability is over the random choice of n, g in G according to the distribution induced by $\mathcal{G}\left(1^k\right)$, the random choice of a, b, c in $\{1, \ldots, |G|\}$ and the random bits of the algorithm $\mathcal{A}$.

Definition 2.11 states that $\left\langle g, g^a, g^b, g^{ab}\right\rangle$ and $\left\langle g, g^a, g^b, g^c\right\rangle$ are *computationally indistinguishable*. It means that no efficient algorithm exists that can distinguish both arguments with non-negligible probability. The concept of computational indistinguishable arguments bears close resemblance to statiscally indistinguishable ensembles. The reader is refered to [6] and [7] for a more in depth discussion of the topic. The intuitive interpretation of Definition 2.11 is that g^{ab} looks like any other random element in G.

Someone with the ability to calculate discrete logarithms could trivially solve the CDH problem. That is, if a and b can be derived only from $\left\langle g^a, g^b\right\rangle$, it becomes easy to calculate g^{ab}. Therefore, a group structure where the CDH assumption holds, immediately implies a group where the DL assumption is valid as well. There is no mathematical proof that supports the inverse relation. Thus, a group where the DL problem is hard not necessarily implies the CDH problem. For specific group structures [10] and [11] show that CDH immediately follows from the DL assumption, however, their proof can not be generalised to just any group.

There exists a similar relation between the CDH and the DDH problem. If a powerful algorithm could solve CDH, i.e. derive g^{ab} from $\left\langle g, g^a, g^b\right\rangle$ alone, it would become trivial to distinguish $\left\langle g, g^a, g^b, g^{ab}\right\rangle$ from $\left\langle g, g^a, g^b, g^c\right\rangle$. Again, an inverse relation can not be proven. As a matter of fact, concrete examples of groups exist where CDH is hard although DDH is not.

Therefore, the relation between DL, CDH and DDH is often written as follows

$$DDH \Rightarrow CDH \Rightarrow DL$$

The $\Rightarrow$ notation is then translated into "immediately implies". In a group where DDH is hard both CDH and DL will be hard. On the contrary, there exist group structures where the CDH and the DL assumption hold while DDH can be found easily. Such groups are called *Gap Diffie-Hellman Groups*.

Definition 2.12 (GDH). The *Gap Diffie-Hellman problem* is defined as follows. Solve the CDH problem with the help of a DDH oracle. Given a finite cyclic group G of order n, a generator $g \in G$ and g^a, g^b with uniformly chosen random independent elements $a, b \in \{1, \ldots, |G|\}$, find the value g^{ab} with the help of a DDH oracle $\mathcal{DDH}\left(g, g^a, g^b, z\right)$. Where the DDH oracle $\mathcal{DDH}\left(g, g^a, g^b, z\right)$ is defined to return `true` if $z = g^{ab}$ and `false` if $z \neq g^{ab}$.

The *Gap Diffie-Hellman assumption* holds if for any algorithm $\mathcal{A}\left(g, g^a, g^b\right)$ trying to solve the CDH problem with the help of a DDH oracle $\mathcal{DDH}\left(g, g^a, g^b, z\right)$ there exists a negligible function $\mu(k)$ such that

$$\Pr\left[\mathcal{A}\left(g, g^a, g^b\right) = g^{ab} \mid \langle G, n, g\rangle \leftarrow \mathcal{G}\left(1^k\right)\right] \leq \mu(k)$$

where the probability is over the random choice of n, g in G according to the distribution induced by $\mathcal{G}\left(1^k\right)$, the random choice of a, b in $\{1, \ldots, |G|\}$ and the random bits of the algorithm $\mathcal{A}$.

As discussed in the next Section 2.4 bilinear pairings are an example of a practical usable DDH oracle [9].

2.4 Bilinear Maps

2.4.1 Definition

Definition 2.13 (Admissible bilinear map). Let G_1, G_2 and G_T be three groups of order q for some large q. An *admissible bilinear map* $e : G_1 \times G_2 \rightarrow G_T$ is defined as a map from the gap groups G_1 and G_2 to the target group G_T that satisfies the following properties:

1. *Bilinearity* $\forall a, b \in \mathbb{Z}, \forall g_1 \in G_1, \forall g_2 \in G_2 : e\left(g_1^a, g_2^b\right) = e\left(g_1, g_2\right)^{ab}$

2. *Non-degeneracy* If g_1 is a generator of G_1 and g_2 is a generator of G_2, $e\left(g_1, g_2\right)$ is a generator of G_T

3. *Computability* There is an efficient algorithm to compute $e\left(g_1, g_2\right)$ for all $g_1 \in G_1$ and $g_2 \in G_2$

2.4.2 Bilinear Diffie-Hellman Assumption

2.4.3 Variants of the Bilinear Diffie-Hellman Assumption

2.5 Secret Sharing

2.5.1 Definition

2.5.2 Verifiable Secret Sharing

2.6 Hash Functions

2.6.1 Definition

2.6.2 Standard Model

2.6.3 Random Oracle Assumption

2.7 Conclusion

The final section of the chapter gives an overview of the important results of this chapter. This implies that the introductory chapter and the concluding chapter don't need a conclusion.

4.2 Proposed Scheme

Cras pretium. Nulla malesuada ipsum ut libero. Suspendisse gravida hendrerit tellus. Maecenas quis lacus. Morbi fringilla. Vestibulum odio turpis, tempor vitae, scelerisque a, dictum non, massa. Praesent erat felis, porta sit amet, condimentum sit amet, placerat et, turpis. Praesent placerat lacus a enim. Vestibulum non eros. Ut congue. Donec tristique varius tortor. Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Nam dictum dictum urna.

4.2.1 Scheme

Phasellus vestibulum orci vel mauris. Fusce quam leo, adipiscing ac, pulvinar eget, molestie sit amet, erat. Sed diam. Suspendisse eros leo, tempus eget, dapibus sit amet, tempus eu, arcu. Vestibulum wisi metus, dapibus vel, luctus sit amet, condimentum quis, leo. Suspendisse molestie. Duis in ante. Ut sodales sem sit amet mauris. Suspendisse ornare pretium orci. Fusce tristique enim eget mi. Vestibulum eros elit, gravida ac, pharetra sed, lobortis in, massa. Proin at dolor. Duis accumsan accumsan pede. Nullam blandit elit in magna lacinia hendrerit. Ut nonummy luctus eros. Fusce eget tortor.

4.2.2 Security Proof

Ut sit amet magna. Cras a ligula eu urna dignissim viverra. Nullam tempor leo porta ipsum. Praesent purus. Nullam consequat. Mauris dictum sagittis dui. Vestibulum sollicitudin consectetuer wisi. In sit amet diam. Nullam malesuada pharetra risus. Proin lacus arcu, eleifend sed, vehicula at, congue sit amet, sem. Sed sagittis pede a nisl. Sed tincidunt odio a pede. Sed dui. Nam eu enim. Aliquam sagittis lacus eget libero. Pellentesque diam sem, sagittis molestie, tristique et, fermentum ornare, nibh. Nulla et tellus non felis imperdiet mattis. Aliquam erat volutpat.

4.2.3 Evaluation

Vestibulum sodales ipsum id augue. Integer ipsum pede, convallis sit amet, tristique vitae, tempor ut, nunc. Nam non ligula non lorem convallis hendrerit. Maecenas hendrerit. Sed magna odio, aliquam imperdiet, porta ac, aliquet eget, mi. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Vestibulum nisl sem, dignissim vel, euismod quis, egestas ut, orci. Nunc vitae risus vel metus euismod laoreet. Cras sit amet neque a turpis lobortis auctor. Sed aliquam sem ac elit. Cras velit lectus, facilisis id, dictum sed, porta rutrum, nisl. Nam hendrerit ipsum sed augue. Nullam scelerisque hendrerit wisi. Vivamus egestas arcu sed purus. Ut ornare lectus sed eros. Suspendisse potenti. Mauris sollicitudin pede vel velit. In hac habitasse platea dictumst.

4.3 Conclusion

Vestibulum sodales ipsum id augue. Integer ipsum pede, convallis sit amet, tristique vitae, tempor ut, nunc. Nam non ligula non lorem convallis hendrerit. Maecenas hendrerit. Sed magna odio, aliquam imperdiet, porta ac, aliquet eget, mi. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Vestibulum nisl sem, dignissim vel, euismod quis, egestas ut, orci. Nunc vitae risus vel metus euismod laoreet. Cras sit amet neque a turpis lobortis auctor. Sed aliquam sem ac elit. Cras velit lectus, facilisis id, dictum sed, porta rutrum, nisl. Nam hendrerit ipsum sed augue. Nullam scelerisque hendrerit wisi. Vivamus egestas arcu sed purus. Ut ornare lectus sed eros. Suspendisse potenti. Mauris sollicitudin pede vel velit. In hac habitasse platea dictumst.

Suspendisse erat mauris, nonummy eget, pretium eget, consequat vel, justo. Pellentesque consectetuer erat sed lacus. Nullam egestas nulla ac dui. Donec cursus rhoncus ipsum. Nunc et sem eu magna egestas malesuada. Vivamus dictum massa at dolor. Morbi est nulla, faucibus ac, posuere in, interdum ut, sapien. Proin consectetuer pretium urna. Donec sit amet nibh nec purus dignissim mattis. Phasellus vehicula elit at lacus. Nulla facilisi. Cras ut arcu. Sed consectetuer. Integer tristique elit quis felis consectetuer eleifend. Cras et lectus.

Ut congue malesuada justo. Curabitur congue, felis at hendrerit faucibus, mauris lacus porttitor pede, nec aliquam turpis diam feugiat arcu. Nullam rhoncus ipsum at risus. Vestibulum a dolor sed dolor fermentum vulputate. Sed nec ipsum dapibus urna bibendum lobortis. Vestibulum elit. Nam ligula arcu, volutpat eget, lacinia eu, lobortis ac, urna. Nam mollis ultrices nulla. Cras vulputate. Suspendisse at risus at metus pulvinar malesuada. Nullam lacus. Aliquam tempus magna. Aliquam ut purus. Proin tellus.

Chapter 5

Implementation

Morbi malesuada hendrerit dui. Nunc mauris leo, dapibus sit amet, vestibulum et, commodo id, est. Pellentesque purus. Pellentesque tristique, nunc ac pulvinar adipiscing, justo eros consequat lectus, sit amet posuere lectus neque vel augue. Cras consectetuer libero ac eros. Ut eget massa. Fusce sit amet enim eleifend sem dictum auctor. In eget risus luctus wisi convallis pulvinar. Vivamus sapien risus, tempor in, viverra in, aliquet pellentesque, eros. Aliquam euismod libero a sem.

5.1 Existing Solutions

Nunc velit augue, scelerisque dignissim, lobortis et, aliquam in, risus. In eu eros. Vestibulum ante ipsum primis in faucibus orci luctus et ultrices posuere cubilia Curae; Curabitur vulputate elit viverra augue. Mauris fringilla, tortor sit amet malesuada mollis, sapien mi dapibus odio, ac imperdiet ligula enim eget nisl. Quisque vitae pede a pede aliquet suscipit. Phasellus tellus pede, viverra vestibulum, gravida id, laoreet in, justo. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Integer commodo luctus lectus. Mauris justo. Duis varius eros. Sed quam. Cras lacus eros, rutrum eget, varius quis, convallis iaculis, velit. Mauris imperdiet, metus at tristique venenatis, purus neque pellentesque mauris, a ultrices elit lacus nec tortor. Class aptent taciti sociosqu ad litora torquent per conubia nostra, per inceptos hymenaeos. Praesent malesuada. Nam lacus lectus, auctor sit amet, malesuada vel, elementum eget, metus. Duis neque pede, facilisis eget, egestas elementum, nonummy id, neque.

5.2 Anonymous Identity-Based Broadcasting Implementation

Proin non sem. Donec nec erat. Proin libero. Aliquam viverra arcu. Donec vitae purus. Donec felis mi, semper id, scelerisque porta, sollicitudin sed, turpis. Nulla in urna. Integer varius wisi non elit. Etiam nec sem. Mauris consequat, risus nec congue condimentum, ligula ligula suscipit urna, vitae porta odio erat quis sapien. Proin luctus leo id erat. Etiam massa metus, accumsan pellentesque, sagittis sit amet, venenatis nec, mauris. Praesent urna eros, ornare nec, vulputate eget, cursus

sed, justo. Phasellus nec lorem. Nullam ligula ligula, mollis sit amet, faucibus vel, eleifend ac, dui. Aliquam erat volutpat.

5.2.1 Implemented Scheme

Fusce vehicula, tortor et gravida porttitor, metus nibh congue lorem, ut tempus purus mauris a pede. Integer tincidunt orci sit amet turpis. Aenean a metus. Aliquam vestibulum lobortis felis. Donec gravida. Sed sed urna. Mauris et orci. Integer ultrices feugiat ligula. Sed dignissim nibh a massa. Donec orci dui, tempor sed, tincidunt nonummy, viverra sit amet, turpis. Quisque lobortis. Proin venenatis tortor nec wisi. Vestibulum placerat. In hac habitasse platea dictumst. Aliquam porta mi quis risus. Donec sagittis luctus diam. Nam ipsum elit, imperdiet vitae, faucibus nec, fringilla eget, leo. Etiam quis dolor in sapien porttitor imperdiet.

5.2.2 Data Structures

Cras pretium. Nulla malesuada ipsum ut libero. Suspendisse gravida hendrerit tellus. Maecenas quis lacus. Morbi fringilla. Vestibulum odio turpis, tempor vitae, scelerisque a, dictum non, massa. Praesent erat felis, porta sit amet, condimentum sit amet, placerat et, turpis. Praesent placerat lacus a enim. Vestibulum non eros. Ut congue. Donec tristique varius tortor. Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Nam dictum dictum urna.

5.3 Distributed Key Generation Implementation

5.3.1 Implemented Scheme

Cras pretium. Nulla malesuada ipsum ut libero. Suspendisse gravida hendrerit tellus. Maecenas quis lacus. Morbi fringilla. Vestibulum odio turpis, tempor vitae, scelerisque a, dictum non, massa. Praesent erat felis, porta sit amet, condimentum sit amet, placerat et, turpis. Praesent placerat lacus a enim. Vestibulum non eros. Ut congue. Donec tristique varius tortor. Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Nam dictum dictum urna.

5.3.2 Data Structures

Phasellus vestibulum orci vel mauris. Fusce quam leo, adipiscing ac, pulvinar eget, molestie sit amet, erat. Sed diam. Suspendisse eros leo, tempus eget, dapibus sit amet, tempus eu, arcu. Vestibulum wisi metus, dapibus vel, luctus sit amet, condimentum quis, leo. Suspendisse molestie. Duis in ante. Ut sodales sem sit amet mauris. Suspendisse ornare pretium orci. Fusce tristique enim eget mi. Vestibulum eros elit, gravida ac, pharetra sed, lobortis in, massa. Proin at dolor. Duis accumsan accumsan pede. Nullam blandit elit in magna lacinia hendrerit. Ut nonummy luctus eros. Fusce eget tortor.

5.4 Evaluation

Vestibulum sodales ipsum id augue. Integer ipsum pede, convallis sit amet, tristique vitae, tempor ut, nunc. Nam non ligula non lorem convallis hendrerit. Maecenas hendrerit. Sed magna odio, aliquam imperdiet, porta ac, aliquet eget, mi. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Vestibulum nisl sem, dignissim vel, euismod quis, egestas ut, orci. Nunc vitae risus vel metus euismod laoreet. Cras sit amet neque a turpis lobortis auctor. Sed aliquam sem ac elit. Cras velit lectus, facilisis id, dictum sed, porta rutrum, nisl. Nam hendrerit ipsum sed augue. Nullam scelerisque hendrerit wisi. Vivamus egestas arcu sed purus. Ut ornare lectus sed eros. Suspendisse potenti. Mauris sollicitudin pede vel velit. In hac habitasse platea dictumst.

5.5 Performance Analysis

Cras pretium. Nulla malesuada ipsum ut libero. Suspendisse gravida hendrerit tellus. Maecenas quis lacus. Morbi fringilla. Vestibulum odio turpis, tempor vitae, scelerisque a, dictum non, massa. Praesent erat felis, porta sit amet, condimentum sit amet, placerat et, turpis. Praesent placerat lacus a enim. Vestibulum non eros. Ut congue. Donec tristique varius tortor. Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Nam dictum dictum urna.

Phasellus vestibulum orci vel mauris. Fusce quam leo, adipiscing ac, pulvinar eget, molestie sit amet, erat. Sed diam. Suspendisse eros leo, tempus eget, dapibus sit amet, tempus eu, arcu. Vestibulum wisi metus, dapibus vel, luctus sit amet, condimentum quis, leo. Suspendisse molestie. Duis in ante. Ut sodales sem sit amet mauris. Suspendisse ornare pretium orci. Fusce tristique enim eget mi. Vestibulum eros elit, gravida ac, pharetra sed, lobortis in, massa. Proin at dolor. Duis accumsan accumsan pede. Nullam blandit elit in magna lacinia hendrerit. Ut nonummy luctus eros. Fusce eget tortor.

Ut sit amet magna. Cras a ligula eu urna dignissim viverra. Nullam tempor leo porta ipsum. Praesent purus. Nullam consequat. Mauris dictum sagittis dui. Vestibulum sollicitudin consectetuer wisi. In sit amet diam. Nullam malesuada pharetra risus. Proin lacus arcu, eleifend sed, vehicula at, congue sit amet, sem. Sed sagittis pede a nisl. Sed tincidunt odio a pede. Sed dui. Nam eu enim. Aliquam sagittis lacus eget libero. Pellentesque diam sem, sagittis molestie, tristique et, fermentum ornare, nibh. Nulla et tellus non felis imperdiet mattis. Aliquam erat volutpat.

5.6 Conclusion

Vestibulum sodales ipsum id augue. Integer ipsum pede, convallis sit amet, tristique vitae, tempor ut, nunc. Nam non ligula non lorem convallis hendrerit. Maecenas hendrerit. Sed magna odio, aliquam imperdiet, porta ac, aliquet eget, mi. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus.

Vestibulum nisl sem, dignissim vel, euismod quis, egestas ut, orci. Nunc vitae risus vel metus euismod laoreet. Cras sit amet neque a turpis lobortis auctor. Sed aliquam sem ac elit. Cras velit lectus, facilisis id, dictum sed, porta rutrum, nisl. Nam hendrerit ipsum sed augue. Nullam scelerisque hendrerit wisi. Vivamus egestas arcu sed purus. Ut ornare lectus sed eros. Suspendisse potenti. Mauris sollicitudin pede vel velit. In hac habitasse platea dictumst.

Suspendisse erat mauris, nonummy eget, pretium eget, consequat vel, justo. Pellentesque consectetuer erat sed lacus. Nullam egestas nulla ac dui. Donec cursus rhoncus ipsum. Nunc et sem eu magna egestas malesuada. Vivamus dictum massa at dolor. Morbi est nulla, faucibus ac, posuere in, interdum ut, sapien. Proin consectetuer pretium urna. Donec sit amet nibh nec purus dignissim mattis. Phasellus vehicula elit at lacus. Nulla facilisi. Cras ut arcu. Sed consectetuer. Integer tristique elit quis felis consectetuer eleifend. Cras et lectus.

Ut congue malesuada justo. Curabitur congue, felis at hendrerit faucibus, mauris lacus porttitor pede, nec aliquam turpis diam feugiat arcu. Nullam rhoncus ipsum at risus. Vestibulum a dolor sed dolor fermentum vulputate. Sed nec ipsum dapibus urna bibendum lobortis. Vestibulum elit. Nam ligula arcu, volutpat eget, lacinia eu, lobortis ac, urna. Nam mollis ultrices nulla. Cras vulputate. Suspendisse at risus at metus pulvinar malesuada. Nullam lacus. Aliquam tempus magna. Aliquam ut purus. Proin tellus.

Chapter

6 Conclusion

The final chapter contains the overall conclusion. It also contains suggestions for future work and industrial applications.

Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris. Appendices

Appendix

A Installing and Executing the Code

Appendices hold useful data which is not essential to understand the work done in the master thesis. An example is a (program) source. An appendix can also have sections as well as figures and references[1].

A.1 Setting up the DKG

Quisque facilisis auctor sapien. Pellentesque gravida hendrerit lectus. Mauris rutrum sodales sapien. Fusce hendrerit sem vel lorem. Integer pellentesque massa vel augue. Integer elit tortor, feugiat quis, sagittis et, ornare non, lacus. Vestibulum posuere pellentesque eros. Quisque venenatis ipsum dictum nulla. Aliquam quis quam non metus eleifend interdum. Nam eget sapien ac mauris malesuada adipiscing. Etiam eleifend neque sed quam. Nulla facilisi. Proin a ligula. Sed id dui eu nibh egestas tincidunt. Suspendisse arcu.

A.2 Setting up Scramble

Nulla in ipsum. Praesent eros nulla, congue vitae, euismod ut, commodo a, wisi. Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Aenean nonummy magna non leo. Sed felis erat, ullamcorper in, dictum non, ultricies ut, lectus. Proin vel arcu a odio lobortis euismod. Vestibulum ante ipsum primis in faucibus orci luctus et ultrices posuere cubilia Curae; Proin ut est. Aliquam odio. Pellentesque massa turpis, cursus eu, euismod nec, tempor congue, nulla. Duis viverra gravida mauris. Cras tincidunt. Curabitur eros ligula, varius ut, pulvinar in, cursus faucibus, augue.

Nulla mattis luctus nulla. Duis commodo velit at leo. Aliquam vulputate magna et leo. Nam vestibulum ullamcorper leo. Vestibulum condimentum rutrum mauris. Donec id mauris. Morbi molestie justo et pede. Vivamus eget turpis sed nisl cursus tempor. Curabitur mollis sapien condimentum nunc. In wisi nisl, malesuada at, dignissim sit amet, lobortis in, odio. Aenean consequat arcu a ante. Pellentesque porta elit sit amet orci. Etiam at turpis nec elit ultricies imperdiet. Nulla facilisi.

In hac habitasse platea dictumst. Suspendisse viverra aliquam risus. Nullam pede justo, molestie nonummy, scelerisque eu, facilisis vel, arcu.

Curabitur tellus magna, porttitor a, commodo a, commodo in, tortor. Donec interdum. Praesent scelerisque. Maecenas posuere sodales odio. Vivamus metus lacus, varius quis, imperdiet quis, rhoncus a, turpis. Etiam ligula arcu, elementum a, venenatis quis, sollicitudin sed, metus. Donec nunc pede, tincidunt in, venenatis vitae, faucibus vel, nibh. Pellentesque wisi. Nullam malesuada. Morbi ut tellus ut pede tincidunt porta. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Etiam congue neque id dolor.

Appendix

B The Last Appendix

Appendices are numbered with letters, but the sections and subsections use arabic numerals, as can be seen below.

B.1 Lorem 20-24

Nulla ac nisl. Nullam urna nulla, ullamcorper in, interdum sit amet, gravida ut, risus. Aenean ac enim. In luctus. Phasellus eu quam vitae turpis viverra pellentesque. Duis feugiat felis ut enim. Phasellus pharetra, sem id porttitor sodales, magna nunc aliquet nibh, nec blandit nisl mauris at pede. Suspendisse risus risus, lobortis eget, semper at, imperdiet sit amet, quam. Quisque scelerisque dapibus nibh. Nam enim. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Nunc ut metus. Ut metus justo, auctor at, ultrices eu, sagittis ut, purus. Aliquam aliquam.

Etiam pede massa, dapibus vitae, rhoncus in, placerat posuere, odio. Vestibulum luctus commodo lacus. Morbi lacus dui, tempor sed, euismod eget, condimentum at, tortor. Phasellus aliquet odio ac lacus tempor faucibus. Praesent sed sem. Praesent iaculis. Cras rhoncus tellus sed justo ullamcorper sagittis. Donec quis orci. Sed ut tortor quis tellus euismod tincidunt. Suspendisse congue nisl eu elit. Aliquam tortor diam, tempus id, tristique eget, sodales vel, nulla. Praesent tellus mi, condimentum sed, viverra at, consectetuer quis, lectus. In auctor vehicula orci. Sed pede sapien, euismod in, suscipit in, pharetra placerat, metus. Vivamus commodo dui non odio. Donec et felis.

Etiam suscipit aliquam arcu. Aliquam sit amet est ac purus bibendum congue. Sed in eros. Morbi non orci. Pellentesque mattis lacinia elit. Fusce molestie velit in ligula. Nullam et orci vitae nibh vulputate auctor. Aliquam eget purus. Nulla auctor wisi sed ipsum. Morbi porttitor tellus ac enim. Fusce ornare. Proin ipsum enim, tincidunt in, ornare venenatis, molestie a, augue. Donec vel pede in lacus sagittis porta. Sed hendrerit ipsum quis nisl. Suspendisse quis massa ac nibh pretium cursus. Sed sodales. Nam eu neque quis pede dignissim ornare. Maecenas eu purus ac urna tincidunt congue.

Donec et nisl id sapien blandit mattis. Aenean dictum odio sit amet risus. Morbi purus. Nulla a est sit amet purus venenatis iaculis. Vivamus viverra purus vel magna. Donec in justo sed odio malesuada dapibus. Nunc ultrices aliquam nunc.

Vivamus facilisis pellentesque velit. Nulla nunc velit, vulputate dapibus, vulputate id, mattis ac, justo. Nam mattis elit dapibus purus. Quisque enim risus, congue non, elementum ut, mattis quis, sem. Quisque elit.

Maecenas non massa. Vestibulum pharetra nulla at lorem. Duis quis quam id lacus dapibus interdum. Nulla lorem. Donec ut ante quis dolor bibendum condimentum. Etiam egestas tortor vitae lacus. Praesent cursus. Mauris bibendum pede at elit. Morbi et felis a lectus interdum facilisis. Sed suscipit gravida turpis. Nulla at lectus. Title: Practical Identity-Based Encryption for Online Social Networks

UDC: 621.3

Abstract:

Here comes a very short abstract, containing no more than 500 words. LaTeX commands can be used here. Blank lines (or the command `\par`) are not allowed!

Nam dui ligula, fringilla a, euismod sodales, sollicitudin vel, wisi. Morbi auctor lorem non justo. Nam lacus libero, pretium at, lobortis vitae, ultricies et, tellus. Donec aliquet, tortor sed accumsan bibendum, erat ligula aliquet magna, vitae ornare odio metus a mi. Morbi ac orci et nisl hendrerit mollis. Suspendisse ut massa. Cras nec ante. Pellentesque a nulla. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Aliquam tincidunt urna. Nulla ullamcorper vestibulum turpis. Pellentesque cursus luctus mauris.

Thesis submitted for the degree of Master of Science in Electrical Engineering, option Embedded Systems and Multimedia

Thesis supervisors: Prof. dr. ir. Bart Preneel
Prof. dr. ir. Vincent Rijmen

Assessors: Prof. dr. Claudia Diaz
Prof. dr. ir. Frank Piessens

Mentor: Filipe Beato
